Tremco Roofing and Building Maintenance Selected as a Cool Roof Supplier to the Clinton Climate Initiative

BEACHWOOD, Ohio (November 1, 2007) — In recognition of its commitment to sustainable roofing technology and development of highly-reflective, energy-reducing roofing systems, Tremco Roofing and Building Maintenance has been named a supplier of cool roof systems to the Clinton Foundation's Climate Initiative (CCI). Tremco will provide such products as its award-winning Rock-It™ roof surfacing system and High-Build Reflective Coating (HBRC) to support the CCI's mission of combating global climate change, including support for the Large Cities Climate Leadership Group (C40).

"It is an honor to be chosen as a partner in the Clinton Climate Initiative's effort to help improve the health of our planet and the quality of life for our citizens," said Deryl Kratzer, president of Tremco Roofing and Building Maintenance. "Tremco is deeply committed to sustainable roofing and has worked for decades to make our products more environmentally friendly." Examples of this include being one of the first roofing system manufacturers to remove asbestos from its entire product line; removing solvents from roofing adhesives; adding recycled content to roofing materials; developing roofing systems that can be applied without the use of torches and hot kettles; and developing a variety of white, reflective, cool roofs to meet different needs. Ten of the company's roofing systems are ENERGY STAR® certified.

Tremco also specializes in vegetative roofing systems, and has been selected by the William J. Clinton Presidential Center to provide the vegetated roof on the Clinton Library in Little Rock, Arkansas.

"Climate change is a global issue that we must address immediately if we are to reverse its catastrophic effects," said President Clinton. "I am pleased that the US Conference of Mayors, Wal-Mart and many businesses are working with my foundation to supply energy efficient and clean energy products. By offering these products at a discounted rate, we can ensure that more cities and citizens have access to them and that the market for clean energy technology will grow. Together, I hope that we can have a measurable impact on greenhouse gas emissions around the world."

In addition to providing roofing systems, Tremco is committed to helping its customers extend the life-cycles of their facilities through repair, restoration, management and maintenance programs. This fits expertly with the CCI's Energy Efficient Building Retrofit Program for C40 cities, which seeks to upgrade facilities to cool roofs.

“One of our primary goals is to reduce the amount of roofing materials that go to landfills,” said Kratzer. “If we can do that while helping organizations embrace the many benefits of cool roofs such as reduced energy costs, lower temperatures and reductions in greenhouse gases, we will be well on our way to helping achieve the CCI’s objectives.”

About Tremco Incorporated

Headquartered in Beachwood, Ohio, Tremco Roofing and Building Maintenance helps manage building life cycles while providing roofing and weatherproofing peace of mind to customers in education, healthcare, government, manufacturing and many other industries. In business since 1928, Tremco Roofing and its subsidiary Weatherproofing Technologies, Inc., are ISO 9001:2000 certified. Tremco Roofing and Building Maintenance is a division of The Tremco Group, an international leader in the construction, maintenance and repair markets. About the Clinton Climate Initiative

Building on his long-term commitment to preserving the environment, President Clinton launched the Clinton Foundation’s Climate Initiative in August 2006 with the mission of applying the Foundation’s business-oriented approach to the fight against climate change in practical, measurable, and significant ways. In its first phase, CCI is working with the C40 Large Cities Climate Leadership Group to accelerate efforts to reduce greenhouse gas emissions. CCI team members have visited nearly all of these cities and are working with them to define projects and take action.
